

Submersible General Dewatering High Head Pumps

LH/LH-W GSZ-4

Extra durable to high water pressure. Ideal for high-head pumping operations.

Oil Lifter (Patented)

This Oil Lifter was developed to improve quality and reliability of our submersible pump by enhancing sealing performance of the mechanical seal.

- * The Oil Lifter is a lubrication device for the mechanical seal that is the heart of the submersible pump.
- * The Oil Lifter stabilizes and enhances mechanical seal lubrication and cooling effect.
- * Offers stable sealing performances even if the oil level drops. Facilitates periodic inspection.

Seal pressure relief system (Except 3.0kW models)

This design features an independent pump casing built separately from the oil casing which incorporates the mechanical seal. An intermediate chamber, opened to the outside, is installed between the pump casing and the oil casing.

Thanks to this configuration, the mechanical seal is exposed to the static (submergence) pressure only without the pumping pressure operating on it. This prevents the mechanical seal from premature wear under the high-head pumping condition.

1

Specification Table

◎ Standard equipment

Application	Submersible pumps		
	Deep well		High-head & High-volume
Series	LH	LH-W	GSZ-4
Discharge bore (mm)	100~200	50~100	150~250
Output (kW)	15~110	3.0~30	37~75
Poles (p)	2	2	4
Center-flange specs	◎	◎ (Except 3.0kW)	
Cylindrical channel	◎	◎	
Dual impeller		◎	
Forced motor cooling			◎

Cylindrical channel (LH, LH-W)

The entirely cylindrical drive channel maintains the motor cooling efficiency adequately high even during operations at a low water level. Also, with the discharge port on its top (sketch), the pump can be installed in a narrow place.

Dual impeller (LH-W)

The dual impeller (photo) remarkably increases the power of pumping up water from a great depth.

Center-flange construction (LH, LH-W)

Enables the pump to be lifted up/down without disconnecting it from piping and stably installed true to the center of gravity.

Forced motor cooling (GSZ-4)

Part of pumped fluid flows in between the outer cover and the motor housing before discharge and thus cools the motor on its way. This allows the pump to operate long and continuously even if it is exposed to the air.

2

For deep-well pre-dewatering or high-head dewatering in civil engineering and construction works.

Performance Curves

Major Standard Specifications

Item	Discharge size mm	Discharge size mm		
		100	150	200
Pumping fluid	Type of fluid	Rain water, Ground water, Sand laden water		
	Liquid temperature	0~40°C		
Pump	Components	Impeller	Closed	
		Shaft seal	Double mechanical seal	
		Bearing	Shielded ball bearing	
	Materials	Impeller	Chromium iron casting	
		Casing	Gray iron casting, Ductile iron casting	
		Mouth ring	Chromium iron casting	
Shaft seal	Silicon carbide			
Motor	Type, poles	Dry-type submersible induction motor, 2 poles		
	Insulation	Class B (15~22kW), Class F (30~110kW)		
	Phase / Voltage	Three-phase / 220V, 380V, 400V, 415V, 440V, 460V, 525V, 575V		
	Motor protector(built-in)	Circle thermal protector (15~22kW), Miniature protector (30kW or over)		
	Leakage sensor(built-in)	Electrode type (55kW or over)		
	Lubricant	Turbine oil (ISO VG32)		
Materials	Frame	Gray iron casting		
	Shaft	420 stainless steel		
	Cable	Chloroprene rubber		
Discharge connection	JIS10K Flange JIS20K Flange			

Standard Accessories

- Cabtyre cable 1 pc (2 pcs for 90 kW version or up)
- Discharge pipe 1 pc (on JIS10K flange specs; accompanying 422, 430, 615, 619, 622, 637, 645, 837, 845, 855, 875, 890 and 8110 types)
- Discharge pipe 1 pc (on JIS20K flange specs; accompanying 675, 690 and 6110 types)
- Electrode-type leakage sensor 1 set (55 kW or over)
- Cathodic protection anodes

Optional Specifications

- Extended cable
- Special paint

Specifications 50/60Hz

Discharge Bore mm	Model	Motor Output kW	Phase	Total Head m	Capacity m³/min	Starting Method	Dry Weight kgs	Length of Cabtyre Cable m
100	LH422	22	Three-phase	60	1.0	D.O.L.	350	10
100	LH430	30	Three-phase	70/75	1.0	Star-Delta	355	10

C.W.L.: Continuous Running Water Level

LH-W

The slim pumps that can be installed in a smaller pipe. Ideal for deep-well pre-dewatering. A dual impeller has greatly increased the pumping power to realize high-head specifications. (Model LH33.0 is a single impeller pump.)

LH23.0W

Standard Accessories

- One 20m Long Power Cable
- Discharge Connection (Thread Connection or Flange)
- Galvanized Corrosion Protection Anodes (except 3kW models)

Optional Accessories

- Extended Cable
- Cathodic Protection Plates (3.0kW models only)
- Centered Discharge (JIS 10K) Flange (3.0kW models only)
- Special Paint

GSZ-4

Equipped with a 4-pole motor, the pumps in this series display their true virtues where a massive amount of water must be drained in a very short period of time.
